

## Hidden sound gem.

AKG has been providing industry leadership and audio innovation to the music business for over 65 years. Having been involved in every aspect of some of the greatest music of all time, leading artists, producers and engineers have come to rely on AKG headphones in their quest for audio excellence. The AKG Y23 is not, however, your typical AKG headphone. They're tiny. Real tiny. Yet, they take full advantage of AKG engineering excellence through their function and design. Which means that, despite their miniature size, they adhere to AKG standards for sound quality, comfort and versatility.

Despite their ultra-small, in-ear size – the smallest available with the greatest sound – their ultra-lightweight design makes them perfect for busy, connective-dependent lifestyles.

The AKG Y23 brings you functionality and convenience in a miniature design. AKG never loses sight of the fact that it's all about sound quality and having round-the-clock access to it. It's how we've built our reputation – two ears at a time.

The AKG Y23 is available in two versions: with a straight cable and with a one-button universal remote/microphone compatible with most Smartphones. These remotes allow you to answer and end calls, or play and pause music, without taking your headphones off.

### HIGHLIGHTS

- ▶ The smallest, lightest, in-ear headphone with the greatest sound
- ▶ High-end connectivity
- ▶ Award-winning, studio-quality AKG sound
- ▶ As portable as you are
- ▶ Unique, custom fit is key
